Attachment 2

Other Addition Non-Regulated Monitoring Data

Customer Service Samples

DC Water operates a program where customers request a lead sampling kit on an annual basis. The kit comes with bottles and instructions on how to take first and second draw samples. Customers collect their own samples and contact DC Water to deliver the bottles to the Washington Aqueduct. Results are then reported back to the customer through DC Water's Customer Service Program.

Post Lead Service Line Replacement Samples

DC Water operates a program where lead sampling kits are dropped off to customers that have had a partial or full lead service line replacement. Samples are typically dropped off approximately 4 months after the replacement to determine if it is necessary for customers to continue filtering their water. The kit comes with bottles and instructions on how to take first and second draw samples. Customers collect their own samples and contact DC Water to deliver the bottles to the Washington Aqueduct. Results are then reported back to the customer through DC Water's Customer Service Program.

Customer Collected Filtered Samples

DC Water operates a program where customers request a lead sampling kit to test their in-line point-of-use filtered water. The test kit comes with a 1-L bottle and instructions on how to take a sample. Customers collect their own sample and contact DC Water to deliver the bottle to the Washington Aqueduct. Results are then reported back to the customer through DC Water's Customer Service Program.

Customer Collected Profiles

DC Water operates a program when customers request a lead sampling kit without knowledge of their service line material. The profile kit comes with ten bottles and instructions on how to collect samples. Customers collect their own samples and contact DC Water to deliver the bottles to the Washington Aqueduct. Results are then reported back to the customer through DC Water's Customer Service Program.

Customer Special Sampling

DC Water creates special sampling profiles or collection procedures to investigate the source of lead. DC Water collected samples and the Washington Aqueduct analyzed the samples for lead.

Pipe Loop Research

DC Water collected stagnated samples from lead pipe loops to simulate lead levels released in the distribution system. The Washington Aqueduct laboratory analyzed the samples for lead.
